4.3.2 Encoding DER . . . . .
------------------------------

# **ASN.1 Basics**

## **Chapter 1**

# **Abstract Syntax Notation: ASN.1**

ASN.1. For example, this data structure may be encoded according to some encoding rules and sent to the destination using the TCP protocol. The ASN.1 specifies several

**1.1.3 The ENUMERATED type**

## 1.3 ASN.1 Constructed Types

### 1.3.1 The SEQUENCE type

This is an ordered collection of other simple or constructed types. The SEQUENCE constructed type resembles the C "struct" statement.

```
Address ::= SEQUENCE {
    -- The apartment number may be omitted
    apartmentNumber      NumericString OPTIONAL,
    streetName           PrintableString,
    cityName             PrintableString,
    stateName            PrintableString,
    -- This one may be omitted too
    zipNo                NumericString OPTIONAL
}
```

### 1.3.2 The SET type

This is a collection of other simple or constructed types. Ordering is not important. The

```
-- an array of structures defined in place.  
ManyCircles ::= SEQUENCE OF SEQUENCE {  
    radius INTEGER  
}
```

### **1.3.5 The SET OF type**

The SET OF type models the bag of structures. It resembles the SEQUENCE OF type, but the order is not important: i.e. the elements may arrive in the order which is not

## **Part II**

# **ASN.1 Compiler**

## **Chapter 2**

# **Introduction to the ASN.1 Compiler**

## **Chapter 3**

### **Quick start**

After building and installing the compi9er, the *asn1c*<sup>1</sup>

## **Chapter 4**

<b>Overall Options</b>	<b>Description</b>
-E	Stop after the parsing stage and print the reconstructed ASN.1 specification code to the standard output.
-F	Used together with -E, instructs the compiler to stop after the ASN.1 syntax tree fixing stage and dump the reconstructed ASN.1 specification to the standard output.
-P	Dump the compiled output to the standard output instead of

### 4.3.2 Encoding DER

The Distinguished Encoding Rules is the *canonical* variant of BER encoding rules. The

Please look into der\_encoder.h for the precise definition of der\_encode() and related types.

#### 4.3.3 Encoding XER

The XER stands for XML Encoding Rules, where XML, in turn, is eXtensible Markup

it does not point to the memory block directly allocated by memory allocation routine, but instead lies within such a block allocated for my\_figure structure.

To solve this problem, the free\_struct 64pTla tem,gume t(besidd

## **Part III**

# **Examples**

# **Chapter 5**

## **Step by step examples**

### **5.1 A "Rectangle" Encoder**

This chapter will help you to create a simple BER and XER encoder of a "Rectangle" type used throughout this document.

## **5.2 A "Rectangle" Decoder**

This chapter will help you to create a simple BER decoder of a simple "Rectangle" type used throughout this document.
